

LET'S RE-EVALUATE THE INTELLECTUAL PROPERTY OF SPAWHE'S INVENTIONS TO STOP GLOBAL WARMING.

By clicking on the following link: <https://www.gofundme.com/f/spawhe-synergic-plants-artificial-welling-hydroelectrenergy?qid=669693a9518559019eb1d9746f7a08b8>, the sums raised appear, which will be used to create demonstrative prototypes of how the environment should be purified and how fixed and mobile sustainable energy should be produced in all sectors of terrestrial activities and similar planets and satellites in the universe, where biological life, chlorophyll photosynthesis and the carbon cycle have developed, which allow for the cold extraction of already clean energy from the same environment, which is infinitely recycled also in means of transport, including space transport, which need to add together Newton's and Lorentz's thrust to bypass gravitational force and navigate in space without fuels and nuclear energy that are not compatible with biological life and the life of human beings. The inventions of SPAWHE proposed by the terrestrial inventor Luigi Antonio Pezone (who claims to have had the probable help of the Creator of the universe to conceive them). He does not consider himself superior to other inventors, of the present and of the past. who have not been able to conceive these inventions, which are, in fact, still virtual and need the support of the entire world population to be tested.

I chose the fundraising solution because I got tired of the silence of the world institutions, of the great science awarded with Nobel and above all, of the false financiers who ask me for personal information and bank details just to extort money from me. My activity as an inventor is a total

economic loss. I carried it forward only to obey technical and scientific intuitions, which I, a simple mechanical expert, should not have had. But thinking about it, and thinking about my entire working life, I understood that I had been guided on a special professional training path by a superior scientific entity. In fact, in recent years, having stopped producing inventions, I dedicated myself more to scientific reading and found confirmation that I had not made any mistakes in my inventions, even if I did not have a complete vision of how the planet works and even less of the universe. My inventions arise from the development of practical details of the operation of fluid dynamic systems and machines and from the exploitation of potential energies present in nature, which to be exploited need human ingenuity, to overcome the state of inertia and subsequently the same ingenuity, to maintain primary kinetic energy over time, transforming it into electrical and electromagnetic energy, and related equipment functioning at the service of men, consuming materials through wear and tear and aging, but producing energy infinitely, being extracted from the terrestrial environment without interruption from inexhaustible energy sources, such as water, air and gravitational force. On the other hand, these three essential elements for the life of men, animals and plants, have always been regenerated infinitely by terrestrial nature in a natural way before the advent of industrial development.

Scientific publications on climatology and climate change, which denounce the excesses of vapor and CO₂ in the atmosphere, for me, are potential negative energies that accumulate in the environment, which become uncontrollable by the ion exchange system between the Earth and the ionosphere that had found the right balance after 4.5 billion. Just before the current industrialization, which together with the comforts, also brought the seeds of rapid destruction, which will not be as slow as the natural cleansing of the Earth's environment from primordial atmospheric gases. With the current rate of cloudbursts, floods and droughts, which has

found the planet without the energy, purification and structural infrastructures necessary to deal with them, there will not be time to repair the damage before even more serious damage occurs. Because the entire ruling class still refuses to go into the details of the wrong anthropic systems at the level of water distribution, purification and fixed energy. Whose basic wrong technology (Thermodynamics) has also negatively affected mobile plants and in particular means of transport and work. Clearly, the alternative development to stop global warming reported on the website <https://www.spawhe.eu> is entirely fluid dynamic and the electrical energy is extracted cold from the terrestrial environment, without being transported at high voltage on overhead pylons as the electrical energy is extracted simply and economically from the same water that we will use in agriculture, industry, homes, sewers, purifiers and means of transport and work. In fact, once we have ascertained that we do not need the hydraulic jump to produce hydroelectric energy, we must do nothing but distribute it better on the territory, simultaneously stopping both climate change and the unequal distribution of world wealth, which is largely due to the trade of thermal energy and the inventions connected to it.

I find it very strange that academic science, which knows climate problems better than I do, continues to remain silent about my solutions only because I do not belong to the world of public research, which among other things, actively collaborates with multinational research also through the trade of industrial patents. This is demonstrated by the billions spent in the CCS system which involved the most important scientists in the world only to hide the problem and continue to consume fuels even with lower thermal yields, as if there were no scientific alternatives to thermal energy.

I believe that global warming has been legally produced by governments and multinationals with the tacit consent of all

social categories that receive public funding and donations, but do nothing concrete to improve the social conditions of humanity, without first thinking about personal profit or that of the academic or corporate category to which they belong.

The undersigned, as soon as he reached the minimum requirements to retire, armed himself with patience and as described in the Spawhe nursery rhyme, began to produce simple inventions to prevent the acidification of sewage starting from domestic systems and the modification of world chimneys to create global systems that would start right from the sewage system to create complete cycles that would also consume the CO₂ in the subsoil through sewage sedimentators equipped with surface oxidation and artificial rains on calcareous materials that would produce complete organic and inorganic cycles, producing, above all, carbonates in the water and also fighting the acidification of lakes and seas. To reduce, above all, the energy cost of these processes, due to the lifting, circulation of the water and its oxidation, almost automatically, he was forced, in the subsequent phases, to invent a different way of producing energy that he called submerged and compressed hydroelectric. Which, not only does not require the hydraulic jump to produce electrical energy, but actually, allows you to oxygenate polluted water for free, because every time the water that produces electrical energy enters the pressurized autoclave, it absorbs oxygen and purifies itself without energy costs. These systems that I began to think about in 2006 and that have also grown with mobile applications mounted on work vehicles and even to create small artificial hearts that are energy autonomous, which by producing the energy needed oxygenate the blood instead of water. Finally, I realized that by producing electrical energy cold, we can add together with Newton's thrust also the Lorentz thrust to better overcome the gravitational force without cumbersome cooling systems and equally cumbersome and expensive fuels. Therefore with my energy, extracted directly from the terrestrial environment we

can also hypothesize the creation of aeronautical and space systems.

But keeping our feet on the ground, with the inventions of SPAWHE, if they had been understood, we would already have the starting points to fight global warming instead of waiting for the same people who boycotted the inventions of SPAWHE to come and talk to us about future solutions, certainly for a fee, because scientific research has very high costs, the new fuels with zero CO₂ emissions will have high production costs, in particular, the new nuclear that will replace nuclear fission with fusion, which does not produce carbon dioxide, but radioactive waste that would be easier to manage. For the great world science this would be an advantage. This science has completely forgotten about steam that causes much more damage than CO₂ being made up of water that has a density 830 times higher than atmospheric air and therefore with the climate changes triggered by the same ionized water in the atmosphere it assumes a proportionally higher quantity of kinetic energy, transforming normal rain and snowfall into storms and typhoons. As a simple designer, installer of anthropic systems and only as a retired inventor of forty patents hindered by science, governments and multinationals, which have not even cost taxpayers a single euro, I believe that huge investments are needed today to put things right. Unfortunately, all the world's wealth is in the hands of the same ruling class that created global warming and tried to hide CO₂ underground. Fortunately, they did not succeed, but they still spent a few hundred billion dollars to search for storage sites a thousand meters deep and study the chemical washing of fuels that already have low yields. Let's not talk about electric cars that, given the low efficiency of storing electricity, always produced from fossil fuels, cause even more CO₂ emissions to be recharged. If, on the other hand, we charge them with nuclear energy, in addition to the low efficiency of recharging, we must also take into account the emissions of steam emitted by the nuclear power plant which is

a greenhouse gas that has double the impact of CO₂. Solar panels and wind turbines are discontinuous, with low yields and the transport of energy, in addition to affecting the economic cost, interferes with the natural exchange between the Ionosphere and the Earth's surface which is the true thermoregulation system of the planet. How can we think that by positioning a solar power plant in space, on a geostationary orbit at about 36,000 km from the Earth's surface, solar panels always exposed to the sun at all hours of the day and in all seasons can transmit electrical energy to the earth without interfering even more with the aforementioned system that we have already altered with the current thermal, nuclear, solar and wind inventions. This solution called SOLARIS, which the European Space Agency is studying, for the undersigned, will further worsen the situation, from an economic and climatic point of view.

Faced with these absurd solutions, I can only insist with my solutions, which are so logical and simple that they cannot fail (this is why I believe that they were suggested to me by a superior scientific entity), we can bring the planet back to the same climatic conditions of the pre-industrial era, with the same percentages of CO₂, steam and natural atmospheric disturbances, as if industrial development had never occurred. However, we will not have to give up the internal climatic well-being of homes nor give up the comfort of terrestrial, marine, submarine and aeronautical means of work and transport and finally we will also be able to create sustainable space transport, since compressed hydroelectric energy has greater potential than thermal energy, wearing out materials less. It is no coincidence that current science has never been able to add the thrust of Newton and Lorentz, which with current technologies cannot be added, although these energies (fossil, nuclear, chemical, biochemical, solar, wind) are more cumbersome and expensive than compressed hydroelectromagnetic energy, which I have been proposing in vain for ten years, only receiving silence. No one has ever contested my

inventions. The entire scientific, political, entrepreneurial ruling class and the world's people have pretended that these inventions do not exist. After all, as they say, if they are roses they will bloom. There is no more time to wait for roses to bloom. Nature is rebelling against the wrong inventions of men. The damage caused by climate change will not allow us to find the resources necessary for reconstruction if we do not immediately change the Earth's energy and environmental policy. For this reason I took the liberty of proposing a public and transparent fundraiser, where every penny spent will be justified, not to save the world directly, but to create demonstrative prototypes that the Spawhe system really works and all the countries in the world can copy it freely without asking permission from any multinational, because intellectual property has nothing to do with industrial property. It is a property that is recognized to all authors of intellectual works, as long as the author is known, even if it is a simple song. Strangely, the WIPO (World Intellectual Property Organization), which is a body of the UN, does not recognize intellectual property only to inventors, having associated it with industrial property. This means that poor people cannot be inventors, if they do not find investors, public or private, who industrialize the inventions. Despite knowing this serious global legislative anomaly, the undersigned has filed over forty industrial patents, paying only the national filing fees. Only for six patents has he also paid international fees. If we consider that after the third year of filing, the owner of the invention is also required to pay annual patent maintenance fees in the countries where the patent was filed, we can easily understand the reasons why an inventor who cannot find financiers cannot afford to maintain industrial property rights of the inventions. But it is impossible to understand the reasons why inventors should also lose the rights to intellectual property, which involved years of study and research. In the case of SPAWHE inventions, we are not talking about commercial inventions that are unconnected to each other, but about

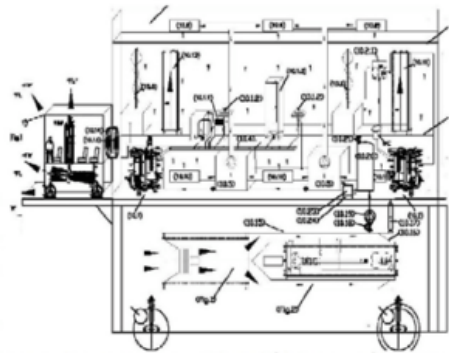

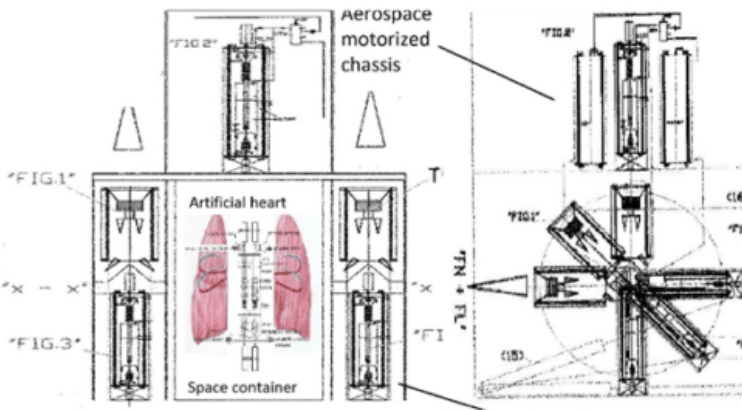

inventions that are interactively connected to each other and born in chronological order. The subsequent ones could not be conceived without hypothesizing the functioning of the previous inventions. Therefore, the work of the intellect is fundamental to establish a complex system of connections between different inventions that together prevent the phenomena that participate in the production of anomalous atmospheric disturbances and at the same time trigger natural purification and energy processes at the temperature of the terrestrial environment, based on known scientific principles of Henry, Dalton, Pascal, Venturi, Maxwell, Lorentz, Tesla, so that fluid dynamics, electromagnetism and mechanics work together to coldly extract energy from the terrestrial environment without producing pollution in the atmosphere and waters of the planet. I believe that nothing concrete can be invented without direct knowledge of the scientific organization of work in the sectors interested in innovations. I have dedicated my entire professional life, consisting of seventeen years of experience in the design and installation of systems in the automotive industry, followed by twenty years of specific experience in the design and installation of energy and environmental systems. Only as a pensioner, starting in 2006, based on the sum of both experiences, I allowed myself to propose myself as an inventor. The experience of the automotive industry helped me to know the best technologies and the scientific organization of work to speed up industrial processes, while the knowledge of public energy and environmental systems helped me to identify which environmental and energy work cycles should be strengthened. It was and still is necessary, above all, to identify how to transform some existing strategic machines and devices, so that they simultaneously perform multiple functions to accelerate both energy and purification processes. It took forty inventions, which I filed and published in chronological order over the years from 2006 to 2020, that public and private science did not understand and never financed. I was able to make the connections between these inventions only in

the following years, when, according to international industrial patent laws, my previous patents had already expired, as I had not paid the annual maintenance fees. But what is serious is the fact that the entire world political, scientific, economic ruling class, both in Communist and capitalist countries, still today, has not noticed anything, being lined up on opposite sides to fight each other with trade wars that do not exploit the interactive energetic and purifying principles identified by the undersigned. So, even if I had paid the annual maintenance fees, as I had not practically demonstrated the functioning of my inventions, my patents would have expired anyway for the entire world ruling class. In the meantime, the weapons of destruction, which use other technologically advanced scientific principles, which destroy men (especially innocent children) and the environment, have had all the funding they need to fight each other on Earth, in the seas and in the atmosphere. This ruling class has been able to completely hide the energy that I have been trying in vain to spread since 2014 through my little website (<https://www.spawhe.eu>) that can be extracted directly from the environment in every corner of the Earth, including the poles and deserts, so that no man or child on planet Earth can suffer the heat or the cold or the lack of water and food, due to the ignorance of the men who govern and those who remain silent for a fee and who have developed destructive technologies that we are seeing daily in the ongoing wars. Above all, in Ukraine and in the Gaza At the same time, because of my unrealized inventions, we are witnessing an unprecedented acceleration of climate change, with immense damage that cannot be repaired, while other even more serious disasters are coming. Clearly, the earth's nature is rebelling against the energy and environmental inventions that humans have been making since the advent of the industrial era, without anyone having concretely opposed them, because even the advertised renewable energies, such as solar and wind, are inefficient and aggravate the problems because terrestrial energy must be produced completely cold and must not be

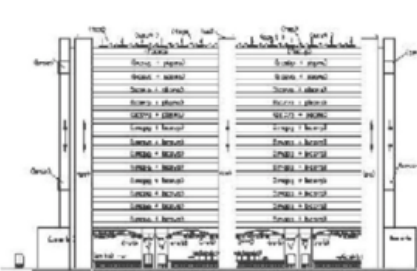

transported over distances on high-voltage pylons. It must be produced locally cold in the quantity needed with complete hydroelectromagnetic cycles compressed without being transported. It is the same energy produced that is self-transported over distances in mobile plants having the possibility of producing Newtonian or Lorentz thrust on board, or the sum of the two thrusts together. The technologies of peace and well-being, proposed by the undersigned, have been boycotted by the entire world ruling class, having been proposed by a simple pensioner not linked to any public or private power center. But these solutions are within the reach of all countries, rich and poor. They would extract clean energy directly from the Earth's environment, through sustainable inventions, which would exploit the Earth's gravitational force, atmospheric air and natural water. These three natural elements, which cost nothing, but are equally technologically advanced from a chemical, physical, biological and electromagnetic point of view (by the will of the Creator of the Universe), could solve all the problems of our time, simply by entrusting gravity and compressed air with the role of energy source and natural water, the role of physical and electromagnetic energy vector, thanks to its characteristics of density, incompressibility and natural ionization in the presence of an electric field. So, through the correct design of hydroelectromagnetic systems, more or less compressed, without the hydraulic jump, but with the complete recycling of water and air, we can produce all the energy needed to manage the planet earth in fixed and mobile systems and also to go into space. Without neglecting the fact that the compressed hydroelectromagnetic system, appropriately shrunk, can enter the human chest and can be used to create small artificial hearts that oxygenate human blood, which will allow us to extend human life beyond all expectations, being able to intervene, both in neurology and in the physiological and pulmonary systems at the same time. All this is still unknown to terrestrial science that is investing in commercial inventions that continue to heat the planet, also because of

science, not that of the past, but of the present. A true scientist or inventor does not sell out his ideas. He fights to the end so that the truth comes out. Only in this way can errors be corrected. To err is human, to persist in fundamentally flawed designs and inventions, as the entire world ruling class is doing, is diabolical. Impartial experimentation is the true world democracy. It was not democratic to deny experimentation to my forty inventions without saying so openly. Simply ignoring them, despite the patent filings and publications, which have been made accessible to all free of charge by the undersigned. Some publishers would also like to be paid because academics with publications earn merit titles that allow career advancement. While the undersigned has to fight with the entire world to be believed. Only the facts prove me right, but I would have to pay lawyers to prove it. With what money? My inventions, unpaid by anyone, have made me poorer than when I was an employee. At least they paid me overtime and they also paid me vacations. These are the laws of men. Those of God no one knows. Not even the churches that have sufficient economic means to finance at least some demonstration prototypes. For this reason I invite the entire world population to finance SPAWHE City which only serves to demonstrate practically that all fixed and mobile anthropic plants can be designed differently from the current ones without producing pollution but improving environment and the world economy.

Luigi Antonio Pezone

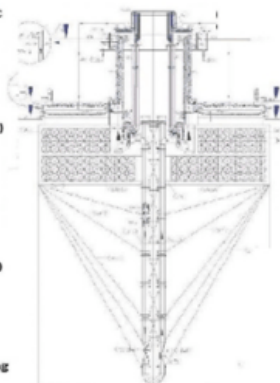

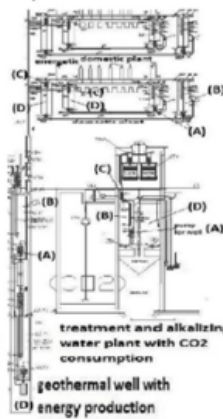

Energy autonomous space container with inter-space dust capture system, internal space survival plants and local displacement vehicle.

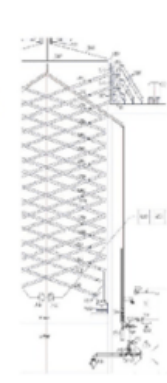

Energy-independent vertical synergistic building with purification plants with superimposed biological ponds and with food crops and automated internal transport system

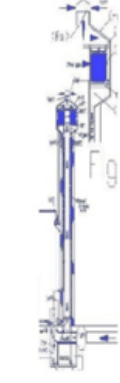

hydroelectromagnetic domestic system

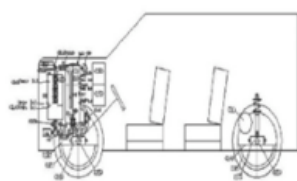

artificial welling with vertical desalination

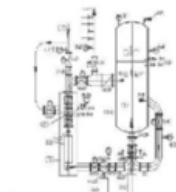

limestone greenhouse with CO₂ consumption and alkaline water production.

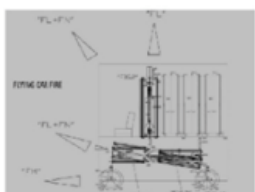

Smoke capture and purification chimney to be combined with limestone greenhouses

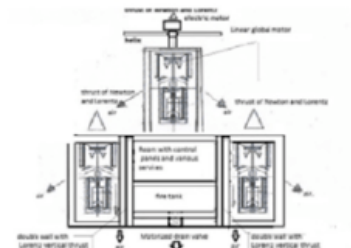

Compressed hydro-electromagnetic car with driving torque applied to the periphery of the wheels

Compressor hydro-electromagnetic current generator with recycling and lifting of condominium waters

Flying fire vehicle with global linear motors, Newton and Lorentz thrusts

Pressurized fire container with Newton and Lorentz

LET'S RE-EVALUATE THE INTELLECTUAL PROPERTY OF SPAWN'S INVENTIONS TO STOP GLOBAL WARMING.
